

Installazione

In tutti i computer/server, MASTER and SLAVE(S), apri un terminale ed esgui: sudo apt-get install apcupsd

Configurazioni nel MASTER

1 - Edita il file diconfigurazione: Prima fai una copia del originale: sudo cp /etc/apcupsd/apcupsd.conf /etc/apcupsd/apcupsd.conf.bak Poi sudo nano /etc/apcupsd/apcupsd.conf Trova e modifica: UPSCABLE, UPSTYPE, DEVICE, POLLTIME, BATTERYLEVEL e MINUTES In genere le opzioni come sotto indicati dovrebbero bastare

```
## apcupsd.conf v1.1 ##
  for apcupsd release 3.14.12 (29 March 2014) - debian
#
# "apcupsd" POSIX config file
#
# ====== General configuration parameters ========
#
UPSCABLE usb
UPSTYPE usb
#DEVICE /dev/ttyS0
# POLLTIME <int>
    Interval (in seconds) at which apcupsd polls the UPS for status. This
#
    setting applies both to directly-attached UPSes (UPSTYPE apcsmart, usb,
#
    dumb) and networked UPSes (UPSTYPE net, snmp). Lowering this setting
#
    will improve apcupsd's responsiveness to certain events at the cost of
#
    higher CPU utilization. The default of 60 is appropriate for most
#
    situations.
#POLLTIME 60
# ====== Configuration parameters used during power failures ========
#
# Note: BATTERYLEVEL, MINUTES, and TIMEOUT work in conjunction, so
# the first that occurs will cause the initation of a shutdown.
# If during a power failure, the remaining battery percentage
# (as reported by the UPS) is below or equal to BATTERYLEVEL,
# apcupsd will initiate a system shutdown.
BATTERYLEVEL 30
# If during a power failure, the remaining runtime in minutes
# (as calculated internally by the UPS) is below or equal to MINUTES,
# apcupsd, will initiate a system shutdown.
MINUTES 10
# ==== Configuration statements for Network Information Server ====
#
# NETSERVER [ on | off ] on enables, off disables the network
# information server.
NETSERVER on
```

NISIP <dotted notation ip address> ... NISIP 0.0.0.0
