

Configurazione Console

Per abilitare o disabilitare la console

<http://localhost:8080/DocWay4-service/engine/console.jsp>

creare un file DocWay4-services.xml in apache-tomcat-7.0.67/conf/Catalina/localhost/ con il contenuto:

```
<?xml version='1.0' encoding='utf-8'?>
<Context displayName="DocWay4-service" path="/DocWay4-service" privileged="true"
workDir="work/Catalina/localhost/DocWay4-service">
  <ResourceLink global="UserDatabase" name="xway" type="org.apache.catalina.UserDatabase"/>
  <!-- <Valve className="org.apache.catalina.valves.RemoteAddrValve" allow="127.0.0.1,localhost"/>-->
<!-- <Valve className="org.apache.catalina.valves.RemoteAddrValve"
allow="127\.|d+\.|d+\.|d+|:1|0:0:0:0:0:0:1"/>-->
</Context>
```

Togliere il commento al

<!-- <Valve className="org.apache.catalina.valves.RemoteAddrValve" allow="127.0.0.1,localhost"/>-->
per bloccare la console.
